

# Human EPO (Erythropoietin) ELISA Kit

Catalog No: tcee77

## Available Sizes

---

**Size:** 96Tests

## Specifications

---

**Research Area:**

Metabolism, Signal transduction, Stem cells, Developmental biology, Cardiovascular, Cancer

**Species Reactivity:**

Human

**Sample Type:**

Serum, plasma and other biological fluids (100µL)

**Assay Type:**

Sandwich

**Sensitivity:**

0.94 mIU/mL

**Detection Range:**

1.56—100 mIU/mL

**Assay Time:**

3.5h

**Detection Method:**

Colormetric

**Tested Application:**

ELISA

**Storage Instruction:**

An unopened kit can be stored at 4°C for 1 month. If the kit is not used within 1 month, store the items separately according to the detailed information on the manual once the kit is received

## Product Description

This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human EPO. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human EPO and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human EPO, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of  $450 \text{ nm} \pm 2 \text{ nm}$ . The OD value is proportional to the concentration of Human EPO. You can calculate the concentration of Human EPO in the samples by comparing the OD of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
