

# VAS2870

## Catalog No: tcsc0012525

#### Pathway:

Others

#### **Target:** Others

#### Purity / Grade:

>98%

Solubility:

DMSO : 83.3 mg/mL (231.14 mM; Need ultrasonic)

#### **Observed Molecular Weight:**

360.39

### **Product Description**

VAS2870 is a NADPH oxidase (NOX) inhibitor.

IC50 & Target: Target: NADPH oxidase<sup>[1]</sup>

In Vitro: VAS2870 is effective to suppress PDGF-BB-dependent activation of NADPH oxidase and subsequent production of intracellular ROS. Furthermore, VAS2870 suppresses PDGF-BB-dependent chemotaxis, but not DNA synthesis. Preincubation with VAS2870 (10 and 20  $\mu$ M) completely abolishes PDGF-mediated NADPH oxidase activation and ROS production. Preincubation with VAS2870 (0.1-20  $\mu$ M) does not affect PDGF-induced cell cycle progression. However, it abolishes PDGF-dependent chemotaxis of VSMC in a concentration-dependent manner (100% inhibition at 10  $\mu$ M)<sup>[1]</sup>. VAS2870 inhibits dose-dependently autocrine increase of cell number in FaO rat hepatoma cells, and almost completely blocked ROS production and thymidine incorporation when used at 25 mM. VAS2870 blocks serum-dependent cell growth of FaO rat hepatoma cells. VAS2870 inhibits proliferation of different human hepatocellular carcinoma (HCC) cell lines. VAS2870 pretreatment enhances TGF-b-mediated apoptosis of FaO rat hepatoma cells<sup>[2]</sup>.
