

**CI-1044** 

Catalog No: tcsc0018397

Available Sizes	
Size: 1mg	
Size: 5mg	
Size: 10mg	
Specifications	
<b>CAS No:</b> 197894-84-1	
<b>Formula:</b> $C_{23}H_{19}N_5O_2$	
<b>Pathway:</b> Metabolic Enzyme/Protease	
<b>Target:</b> Phosphodiesterase (PDE)	
Purity / Grade: >98%	
<b>Solubility:</b> DMSO: 125 mg/mL (314.52 mM; Need ultrasonic)	
Alternative Names: PD-189659	
Observed Molecular Weight:	

## **Product Description**

397.43

CI-1044 is an orally active **PDE4** inhibitor with **IC**<sub>50</sub>s of 0.29, 0.08, 0.56, 0.09  $\mu$ M for **PDE4A5**, **PDE4B2**, **PDE4C2** and **PDE4D3**, respectively.

IC50 & Target: IC50: 0.29  $\mu$ M (PDE4A5), 0.08  $\mu$ M (PDE4B2), 0.56  $\mu$ M (PDE4C2), 0.09  $\mu$ M (PDE4D3) [1]

In Vitro: CI-1044 is an orally active PDE4 inhibitor with IC $_{50}$ s of 0.29, 0.08, 0.56, 0.09  $\mu$ M for PDE4A5, PDE4B2, PDE4C2 and PDE4D3, respectively. CI-1044 selectively inhibits PDE4 crude extract from U937 cells with an IC $_{50}$  value of 0.27 $\pm$ 0.02  $\mu$ M being threefold more potent than rolipram (IC $_{50}$ =0.91 $\pm$ 0.14) and tenfold less potent than cilomilast (IC $_{50}$ =0.026 $\pm$ 0.007) in the same assay. In the presence of PDE4 inhibitors, the production of TNF- $\alpha$  is dose dependently decreased with mean IC $_{50}$  values from three separate experiments of 0.31 $\pm$ 0.05, 0.26 $\pm$ 0.05 and 0.11 $\pm$ 0.01  $\mu$ M, for CI-1044, cilomilast and rolipram, respectively<sup>[1]</sup>.

In Vivo: TNF- $\alpha$  production is dose-dependently inhibited by CI-1044, rolipram and cilomilast with ID<sub>50</sub>s of 0.4, 1.4 and 1.6 mg/kg respectively following single oral administration. Following repeated administration with CI-1044, the ID<sub>50</sub> value represents 0.5 mg/kg p.o.. CI-1044 plasma levels increase proportionally with doses ranging between 0.1 and 40 mg/kg p.o. (R2=0.878). CI-1044 dose dependently inhibits the accumulation of eosinophils in Bronchoalveolar lavages (BAL) fluids with an ID<sub>50</sub> value of 3.25 mg/kg. A single dose treatment with CI-1044 (10 mg/kg, p.o.) 24, 8, 3 or 1 h before the antigen challenge induces 6, 56, 48 and 79% inhibition in the number of eosinophils in BAL<sup>[1]</sup>.
