

# FR167344 free base

Catalog No: tcsc0018453

## Available Sizes

Size: 1mg

Size: 5mg

Size: 10mg

## Specifications

**CAS No:**

215258-13-2

**Formula:**

$C_{30}H_{28}BrCl_2N_5O_4$

**Pathway:**

GPCR/G Protein

**Target:**

Bradykinin Receptor

**Purity / Grade:**

>98%

**Solubility:**

10 mM in DMSO

**Observed Molecular Weight:**

673.38

## Product Description

FR167344 free base is an orally active, nonpeptide **bradykinin receptor B2** antagonist. FR167344 free base shows a high affinity binding to the B2 receptor with an **IC<sub>50</sub>** value of 65 nM and no binding affinity for the B1 receptor.

IC50 & Target: IC50: 65 nM (Bradykinin receptor B2)<sup>[1]</sup>

**In Vitro:** In competitive experiments using membranes prepared from Chinese hamster ovary cells expressing the bradykinin receptor subtypes, FR167344 shows a high affinity binding to the B2 receptor with IC<sub>50</sub> values of 65 nM, and no binding affinity for the B1 receptor. FR167344 inhibits the B2 receptor-mediated phosphatidylinositol (PI) hydrolysis and produces a concentration-dependent rightward shift in the dose-response curve to bradykinin. This shift is accompanied by a progressive reduction of maximal response. Estimated pA2 values for the antagonism of bradykinin induced PI hydrolysis by FR167344 is 8.0. FR167344 shows no stimulatory effects on PI hydrolysis<sup>[1]</sup>.

**In Vivo:** Oral administration of FR167344 inhibits carrageenin-induced paw oedema in rats with an ID<sub>50</sub> of 2.7 mg/kg at 2h after carrageenin injection. Oral administration of FR167344 inhibits kaolin-induced writhing in mice with an ID<sub>50</sub> of 2.8 mg/kg in 10 min writhing and 4.2 mg/kg in 15 min writhing. Oral administration of FR167344 inhibits caerulein-induced pancreatic oedema with an ID<sub>50</sub> of 13.8 mg/kg as well as increases in amylase and lipase of blood samples with ID<sub>50</sub> of 10.3 and 7.4 mg/kg, respectively, in rats<sup>[2]</sup>.
