

# PhiKan 083 hydrochloride

## Catalog No: tcsc0039394

Available Sizes

Size: 5mg

Size: 10mg

Size: 25mg

**Specifications** 

CAS No:

1050480-30-2

Formula:

 $C_{16}H_{19}CIN_2$ 

Pathway:

Apoptosis

**Target:** 

MDM-2/p53

**Purity / Grade:** 

#### Solubility:

H2O : 2 mg/mL (7.28 mM; Need ultrasonic and warming)

#### **Observed Molecular Weight:**

274.79

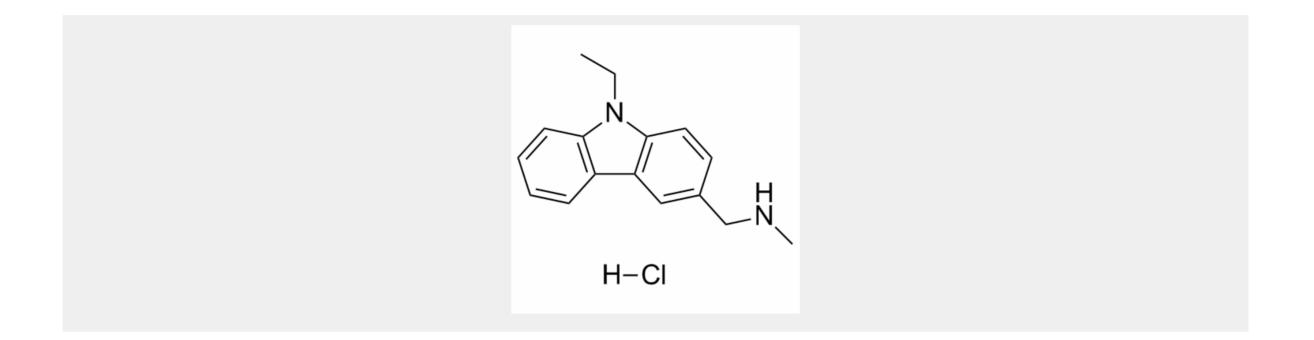

### **Product Description**

PhiKan 083 hydrochloride is a carbazole derivative, which can stabilize **Y220C** (a **p53** mutant), with a  $K_d$  of 167  $\mu$ M measured by NMR, used for cancer research.

IC50 & Target: Kd: 167 µM (T-p53C-Y220C)<sup>[1]</sup>

In Vitro: PhiKan 083 hydrochloride is a stabilizer of Y220C (a p53 mutant), with a K<sub>d</sub> of 167  $\mu$ M measured by NMR. Analytical ultracentrifugation gives a K<sub>d</sub> of 170  $\mu$ M for PhiKan083, at 10°C. Isothermal titration of PhiKan083 with T-p53C-Y220C gives 1:1 stoichiometry and a K<sub>d</sub> of 125 ± 10  $\mu$ M<sup>[1]</sup>. PhiKan083 can binds with the cavity on the surface of Y220C-mutated p53<sup>[2]</sup>.
