## **Product Description**

BPR1J-097 Hydrochloride is a novel and potent **FLT3** inhibitor with an  ${
m IC}_{50}$  of 11 nM.

IC50 & Target: IC50: 11 nM (FLT3)<sup>[1]</sup>

In Vitro: BPR1J-097 Hydrochloride is a novel and potent FLT3 inhibitor with an  $IC_{50}$  of 11nM. Phosphorylation of all FLT3-WT, FLT3-WT

IDT, and FLT3-D835Y are inhibited by BPR1J-097 Hydrochloride at a concentration as low as 10 nM. BPR1J-097 Hydrochloride suppresses the phosphorylation of FLT3 and STAT5 in a dose-dependent manner. The IC $_{50}$  values of BPR1J-097 Hydrochloride on MOLM-13 and MV4-11 cells are 21 $\pm$ 7 and 46 $\pm$ 14 nM, respectively. The emergence of active caspase-3 is observed in MOLM-13 cells treated with BPR1J-097 Hydrochloride at 10 nM. The effect of BPR1J-097 Hydrochloride seems to be weaker in MV4-11 cells as caspase-3 is not evident until 100 nM of BPR1J-097 Hydrochloride is applied to treat cells<sup>[1]</sup>.

In Vivo: After i.v. administration of mice with BPR1J-097 Hydrochloride at two cycles of 10 or 25 mg/kg, a clear dose-dependent anti-tumour effect is observed. Tumours in mice treated with BPR1J-097 Hydrochloride (25 mg/kg per day) stop growing. BPR1J-097 Hydrochloride (25 mg/kg) shows a significant tumour shrinkage effect on the subcutaneously growing MOLM-13 tumours in a size of >2000 mm<sup>3</sup>. BPR1J-097 Hydrochloride (10 and 25 mg/kg) also produces a dose-dependent growth reduction and shrinkage of another model using MV4-11 cells. It is noted that a prolonged disappearance of MV4-11 tumours is observed in mice treated with BPR1J-097 Hydrochloride at 25 mg/kg. There is little (3%) or no body weight loss of BPR1J-097 Hydrochloride-treated nude mice during the observation periods in these *in vivo* studies<sup>[1]</sup>.
