

Laquinimod

Catalog No: tcsc0839

Available Sizes

Size: 5mg

Size: 10mg

Size: 50mg

Size: 500mg

Size: 500mg

CAS No:

248281-84-7

Formula:

 $\mathsf{C}_{19}\mathsf{H}_{17}\mathsf{CIN}_2\mathsf{O}_3$

Pathway:

NF-ĸB

Target: NF-κB

Purity / Grade:

>98%

Solubility:

10 mM in DMSO

Alternative Names:

ABR-215062

Copyright 2021 Taiclone Biotech Corp.

Observed Molecular Weight:

356.8

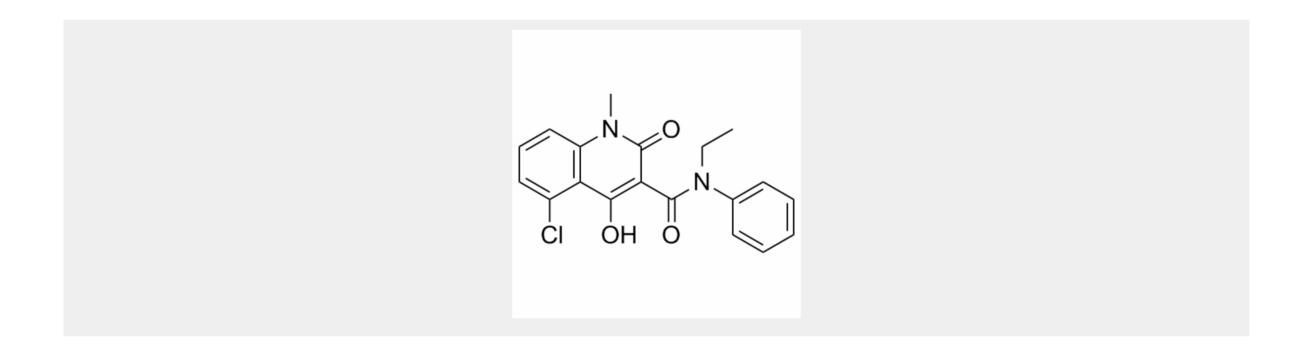

Product Description

Laquinimod is a potent immunomodulator; reduces NF-kB activation in astrocytic.

IC50 & Target: NF-κB^[3]

In Vitro: Laquinimod reverses EAE and inhibits pathogenic T cell immune responses. Laquinimod reverses RR-EAE and inhibits inflammatory T cell responses via a direct effect on myeloid APC. Laquinimod alters myeloid APC subsets and inhibits Th1 and Th17 polarization of myelin-specific T cells. Laquinimod-induced type II (M2) monocytes reverse established $EAE^{[1]}$. Laquinimod modulates the phenotype of B cells of healthy donors. Laquinimod modulates expression of markers related to regulatory capacity in B cells of RRMS patients. Laquinimod reduces IFN γ cytokine expression in CD4⁺ T cells^[2].

In Vivo: Laquinimod treatment inhibits donor myelin-specific T cells from transferring EAE to naive recipient mice. In vivo laquinimod treatment alters subpopulations of myeloid antigen presenting cells (APC) that include a decrease in CD11c⁺CD11b⁺CD4 ⁺ dendritic cells (DC) and an elevation of CD11b^{hi}Gr1^{hi} monocytes^[1].
