

# Camptothecin

**Catalog No: tcsc1049**

## Available Sizes

**Size:** 100mg

**Size:** 500mg

## Specifications

**CAS No:**

7689-03-4

**Formula:**

$C_{20}H_{16}N_2O_4$

**Pathway:**

Antibody-drug Conjugate/ADC Related; Anti-infection; Apoptosis; Cell Cycle/DNA Damage; Epigenetics

**Target:**

ADC Cytotoxin; Antibiotic; Apoptosis; Fungal; Influenza Virus; MicroRNA; Topoisomerase

**Purity / Grade:**

99.58%

**Solubility:**

DMSO : 6.25 mg/mL (17.94 mM; Need ultrasonic)

**Storage Instruction:**

2-8°C, protect from light

**Alternative Names:**

Camptothecin; (S)-(+)-Camptothecin; CPT

**Observed Molecular Weight:**

348.35

## Product Description

Camptothecin is a potent DNA enzyme **topoisomerase I** inhibitor, with an **IC<sub>50</sub>** of 679 nM.

IC50 & Target: IC50: 679 nM (topoisomerase I)<sup>[3]</sup>

**In Vitro:** [<sup>3</sup>H]BrCPT labeling of topoisomerase I is enhanced greatly by the presence of DNA; very little labeling of isolated topoisomerase I or isolated DNA occurs. Even in the presence of DNA, [<sup>3</sup>H]BrCPT labeling of topoisomerase I is inhibited by camptothecin, suggesting that both CPT and BrCPT bind to the same site on the DNA-topoisomerase I binary complex<sup>[1]</sup>. With increasing concentrations of camptothecin, closed circular pRR322 DNA (form I) is converted to nicked circular DNA (form II). This apparent nicking activity of camptothecin required DNA topoisomerase I<sup>[2]</sup>.
