

AM095 (free acid)

Catalog No: tcsc1129

Available Sizes
Size: 5mg
Size: 10mg
Size: 50mg
Size: 100mg
Size: 200mg
Size: 500mg
Specifications
CAS No: 1228690-36-5
Formula: $C_{27}^{H}_{24}^{N}_{2}^{O}_{5}$
Pathway: GPCR/G Protein
Target: LPL Receptor
Purity / Grade: >98%
Solubility: DMSO : 67.3 mg/mL (147.43 mM; Need ultrasonic and warming)
Observed Molecular Weight: 456.49

Product Description

AM095 (free acid) is a potent **LPA1** receptor antagonist with IC_{50} values of 0.98 and 0.73 μ M for recombinant human or mouse LPA1 respectively.

IC50 & Target: IC50: 0.98 μM (human LPA1), 0.73 μM (mouse LPA1)

In Vitro: AM095 inhibits the LPA-induced calcium flux of CHO cells stably transfected with human or mouse LPA1. The IC $_{50}$ for AM095 antagonism of LPA-induced calcium flux of human or mouse LPA1-transfected CHO cells is 0.025 and 0.023 μ M, respectively [1]. AM095 reduces LPA-induced vasorelaxation by appr 90% at 10 μ M as compared to vehicle control [2]. AM095 inhibits LPA-driven chemotaxis of CHO cells overexpressing mouse LPA1 (IC $_{50}$ =778 nM) and human A2058 melanoma cells (IC $_{50}$ =233 nM)[3].

In Vivo: Pharmacological antagonism of LPA1 with AM095 significantly attenuates bleomycin-induced dermal fibrosis^[1]. AM095 has high oral bioavailability and a moderate half-life and is well tolerated at the doses tested in rats and dogs after oral and intravenous dosing. AM095 dose-dependently reduces LPA-stimulated histamine release. AM095 attenuates bleomycin-induced increases in collagen, protein, and inflammatory cell infiltration in bronchalveolar lavage fluid. AM095 decreases kidney fibrosis in a mouse unilateral ureteral obstruction model^[3].
