

Otenabant (Hydrochloride)

Catalog No: tcsc1278

Available Sizes

Size: 5mg

Size: 10mg

Size: 50mg

Specifications

CAS No:

686347-12-6

Formula:

$C_{25}H_{26}Cl_3N_7O$

Pathway:

GPCR/G Protein

Target:

Cannabinoid Receptor

Purity / Grade:

>98%

Solubility:

10 mM in DMSO

Alternative Names:

CP 945598 Hydrochloride

Observed Molecular Weight:

546.88

Product Description

Otenabant Hydrochloride is a potent and selective **cannabinoid receptor CB1** antagonist with **K_i** of 0.7 nM, exhibits 10,000-fold greater selectivity against human CB2 receptor.

IC50 & Target: K_i: 0.7 nM (CB1)

In Vitro: Otenabant HCl has low affinity with K_i of 7.6 μM for human CB2 receptors^[1]. Otenabant HCl inhibits CB1 receptor with moderate unbound microsomal clearance, low hERG affinity, and adequate CNS penetration^[2].

In Vivo: Otenabant acutely stimulates energy expenditure in rats and decreases the respiratory quotient indicating a metabolic switch to increased fat oxidation. Otenabant (10 mg/kg, p.o.) promotes a 9%, vehicle adjusted weight loss in a 10 day weight loss study in diet-induced obese mice^[1]. Otenabant HCl reverses four cannabinoid agonist-mediated behaviors (locomotor activity, hypothermia, analgesia, and catalepsy) following administration of the synthetic CB1 receptor agonist CP-55940. Otenabant HCl exhibits dose-dependent anorectic activity in a model of acute food intake in rodents and increased energy expenditure and fat oxidation^[2].
