

Famciclovir

Catalog No: tcsc1357

Available Sizes

Size: 50mg

Size: 100mg

Specifications

CAS No:

104227-87-4

Formula:

$C_{14}H_{19}N_5O_4$

Pathway:

Anti-infection

Target:

HSV

Purity / Grade:

>98%

Solubility:

H₂O : 50 mg/mL (155.60 mM; Need ultrasonic); DMSO : ≥ 100 mg/mL (311.21 mM)

Alternative Names:

BRL 42810

Observed Molecular Weight:

321.33

Product Description

Famciclovir(BRL 42810) is a guanine analogue antiviral drug used for the treatment of various herpesvirus infections.

IC50 Value: Refer to penciclovir

Target: HSV

Famciclovir is the diacetyl 6-deoxy analog of the active antiviral compound penciclovir with potential use in the treatment of infections caused by the herpes family of viruses [1]. Famciclovir, a synthetic acyclic guanine derivative, is a prodrug which, after oral administration, is rapidly metabolised to the highly bioavailable antiviral compound penciclovir [2].

in vitro: Famciclovir induced rapid, dose-dependent suppression of viral replication and reduction in alanine aminotransferase (ALT), with greatest efficacy in the 500-mg tid treatment group. HBV DNA reduction was maintained throughout the treatment period. ALT also steadily declined during the treatment period [3].

in vivo: In rat, following dosing at 40 mg/kg, famciclovir was rapidly and extensively metabolized to the active antiviral compound penciclovir, which reached peak concentrations in the plasma (mean 3.5 micrograms/ml) at 0.5 h [4]. Necrotic hepatitis was significantly (p

Clinical trial: Famciclovir Pediatric Formulation In Children 1 to 12 Years Of Age With Herpes Simplex Infection. Phase3
