

Necrostatin 2 (racemate)

Catalog No: tcsc1664

Available Sizes

Size: 1mg

Size: 5mg

Size: 10mg

Size: 50mg

Specifications

CAS No:

852391-15-2

Formula:

$C_{13}H_{12}ClN_3O_2$

Pathway:

Apoptosis

Target:

TNF Receptor

Purity / Grade:

>98%

Solubility:

10 mM in DMSO

Alternative Names:

Necrostatin-2 racemate

Observed Molecular Weight:

277.71

Product Description

Necrostatin 2 is a potent necroptosis inhibitor with EC50 of 50 nM.

IC50 Value: 50 nM (EC50) [1]

Target: TNF-alpha

Necrostatin 2 is a potent in vitro necroptosis inhibitors (exemplified by 1, EC50-0.05 uM) that also were efficacious in an animal model of ischemic stroke. Many Necroptosis inhibitor derivatives are designed for researchers.

Necroptosis is a regulated caspase-independent cell death mechanism that results in morphological features resembling necrosis. It can be induced in a FADD-deficient variant of human Jurkat T cells treated with TNF- α . 5-(1H-Indol-3-ylmethyl)-2-thiohydantoin and 5-(1H-indol-3-ylmethyl)hydantoin were found to be potent necroptosis inhibitors (called necrostatins).

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
