

Finasteride (acetate)

Catalog No: tcsc1768

Available Sizes

Size: 100mg

Size: 200mg

Specifications

CAS No:

222989-99-3

Formula:

$C_{25}H_{40}N_2O_4$

Pathway:

Metabolic Enzyme/Protease

Target:

5 alpha Reductase

Purity / Grade:

>98%

Solubility:

10 mM in DMSO

Alternative Names:

MK-906 acetate

Observed Molecular Weight:

432.6

Product Description

Finasteride (acetate) is an orally active testosterone 5-alpha-reductase inhibitor.

Target: 5- α Reductase

Approved: 1992

Finasteride (acetate) is the acetate salt of finasteride which is a synthetic 4-azasteroid antiandrogen compound, is a specific inhibitor of steroid Type II 5 α -reductase, an intracellular enzyme that converts the androgen testosterone into 5 α -dihydrotestosterone (DHT). Finasteride is used in the treatment of prostate cancer, benign prostatic hyperplasia, and androgenetic alopecia (male pattern baldness). In benign prostatic hyperplasia, finasteride inhibits 5 α -reductase activity in epithelium for K_i of 10nM, significantly lower than in stroma (K_i = 33nM) [1].
