

Siramesine

Catalog No: tcsc1920

Available Sizes

Size: 5mg

Size: 10mg

Size: 50mg

Size: 100mg

Specifications

CAS No:

147817-50-3

Formula:

$C_{30}H_{31}FN_2O$

Pathway:

GPCR/G Protein

Target:

Sigma Receptor

Purity / Grade:

>98%

Solubility:

10 mM in DMSO

Alternative Names:

Lu 28-179

Observed Molecular Weight:

454.58

Product Description

Siramesine(Lu 28-179) is a selective sigma-2 receptor agonist, which has been shown to trigger cell death of cancer cells and to exhibit a potent anticancer activity in vivo.

IC50 value:

Target: sigma-2 receptor; lysosome-destabilizing agent

siramesine can induce rapid cell death in a number of cell lines at concentrations above 20 μ M. In HaCaT cells, cell death was accompanied by caspase activation, rapid loss of mitochondrial membrane potential (MMP), cytochrome c release, cardiolipin peroxidation and typical apoptotic morphology, whereas in U-87MG cells most apoptotic hallmarks were not notable, although MMP was rapidly lost [1]. Siramesine, a sigma-2 receptor agonist originally developed as an anti-depressant, can induce cell death in transformed cells through a mechanism involving lysosomal destabilization [2].

in vivo: SA4503 or siramesine given jointly with MEM (as well as with AMA) decreased the immobility time in rats. The effect of SA4503 and AMA co-administration was antagonized by progesterone, a sigma1 receptor antagonistic neurosteroid. Combined treatment with siramesine and AMA was modified by neither progesterone nor BD1047 (a novel sigma antagonist with preferential affinity for sigma1 sites) [3]
