

Tranilast (Sodium)

Catalog No: tcsc2093

Available Sizes

Size: 10mg

Size: 50mg

Specifications

CAS No:

104931-56-8

Formula:

$C_{18}H_{16}NNaO_5$

Pathway:

GPCR/G Protein

Target:

Angiotensin Receptor

Purity / Grade:

>98%

Solubility:

10 mM in H₂O

Alternative Names:

Sodium Tranilast;MK 341 Sodium;SB 252218 Sodium

Observed Molecular Weight:

349.31

Product Description

Tranilast is an antiallergic agent.

Target: Angiotensin Receptor

Tranilast has been approved in Japan and South Korea, since 1982, for the treatment of bronchial asthma, with indications for keloids and hypertrophic scar added in 1993. Tranilast is also used to treat asthma, autoimmune diseases, atopic and fibrotic pathologies, and can also inhibit angiogenesis. The antiproliferative properties of tranilast were found that tranilast elicited an inhibitory effect on fibroblast proliferation in vitro and also suppressed collagen production both in vitro and in vivo . Tranilast also reduced the release of chemical mediators from mast cells and suppressed hypersensitivity reactions. [1]

Three-week-old C57Bl/10 and mdx mice received tranilast (~300 mg/kg) in their food for 9 weeks, after which fibrosis was assessed through histological analyses, and functional properties of tibialis anterior muscles were assessed in situ and diaphragm muscle strips in vitro. Tranilast administration did not significantly alter the mass of any muscles in control or mdx mice, but it decreased fibrosis in the severely affected diaphragm muscle by 31% compared with untreated mdx mice (P
