

# Xylazine (hydrochloride)

Catalog No: tcsc2550

## Available Sizes

**Size:** 100mg

**Size:** 500mg

## Specifications

**CAS No:**

23076-35-9

**Formula:**

$C_{12}H_{17}ClN_2S$

**Pathway:**

GPCR/G Protein

**Target:**

Adrenergic Receptor

**Purity / Grade:**

>98%

**Solubility:**

DMSO :  $\geq 100$  mg/mL (389.42 mM)

**Alternative Names:**

BAY 1470 hydrochloride

**Observed Molecular Weight:**

256.79

## Product Description

Xylazine Hydrochloride is  $\alpha 2$  class of adrenergic receptor agonist.

**Target: Adrenergic Receptor**

Xylazine is a drug that is used for sedation, anesthesia, muscle relaxation, and analgesia in animals such as horses, cattle and other non-human mammals. An analogue of clonidine, it is an agonist at the  $\alpha_2$  class of adrenergic receptor. Xylazine has recently emerged as a recreational drug, especially in Puerto Rico [1]. Administration of xylazine (0.17 mg/kg of body weight, diluted to a 10-ml volume, using 0.9% NaCl) induced approximately 2.5 hours of local analgesia without apparent side effects. Higher doses of xylazine caused mild hind limb ataxia. Administration of lidocaine induced a similar duration of analgesia, with severe hind limb ataxia (100% incidence). We concluded that xylazine given by epidural injection results in safe, effective perineal analgesia in horses [2].
