GNE-7915

Catalog No: tcsc3094

Available Sizes

Size: 10mg

Size: 50mg

Size: 100mg

Size: 200mg

Specifications

CAS No:
1351761-44-8

Formula:
$C_{19}H_{21}F_4N_5O_3$

Pathway:
Autophagy

Target:
LRRK2

Form:
Off-white to light yellow (Solid)

Purity / Grade:
99.66%

Solubility:
DMSO : 14.33 mg/mL (32.32 mM; Need ultrasonic and warming)
Water:

Storage Instruction:
2-8°C

Tel: +886-2-2735-9682
Email: order@taiclone.com

Alternative Names:
Methanone, [4-[[4-(ethylamino)-5-(trifluoromethyl)-2-pyrimidinyl]amino]-2-fluoro-5- methoxyphenyl]-4-morpholinyl

Observed Molecular Weight:
443.4

Protocol:
Animal administration [1] Thus, BAC transgenic mice expressing human LRRK2 protein with the G2019S Parkinson's disease mutation were given either a single oral dose (po) or intraperotineal (ip) injection. Brain (hippocampus) and peripheral (spleen) tissues were harvested 1-24 h postdose to assess pSer1292 levels and compound concentration. The concentration-dependent knockdown of pLRRK2 in the brain after oral dosing with GNE-7915 at both 15 and 50 mg/kg and after ip dosing at both 10 and 50 mg/kg.

Discovery of highly potent, selective, and brain-penetrable leucine-rich repeat kinase 2 (LRRK2) small molecule inhibitors. J Med Chem. 2012 Nov 26;55(22):9416-33

Product Description

GNE-7915 is a potent, selective and brain-penetrant inhibitor of **LRRK2** with an **IC_{50}** of 9 nM.

IC50 & Target: IC50: 9 nM[1] (LRRK2)

In Vitro: Maintaining the methoxy/fluoro arrangement at C-2′/C-5′ and varying aminoalkyl R1 substitution resultes in single-digit nanomolar LRRK2 cellular activities for GNE-7915 and compound 19. Expanded Invitrogen kinase profiling (187 kinases) at 0.1 μM for both GNE-7915 (100-fold over LRRK2 Ki) and 19 (250-fold over LRRK2 Ki) resultes in only TTK showing greater than 50% inhibition. Selectivity profiling using the DiscoverX KinomeScan55 competitive binding assay panel, which includes 392 unique kinases, is also performed for GNE-7915 at 0.1 μM. Binding of >50% probe displacement is detected for 10 kinases and of >65% for only LRRK2, TTK, and ALK, further supporting the excellent LRRK2 selectivity for GNE-7915. Cerep receptor profiling, including expanded brain panels, suggestes that GNE-7915 and 19 only inhibite 5-HT_{2B} with >70% inhibition at 10 μM. GNE-7915 and 19 are confirmed to be moderately potent 5-HT_{2B} antagonists in vitro functional assays[2].
