

Atipamezole (hydrochloride)

Catalog No: tcsc3389

Available Sizes

Size: 10mg

Size: 50mg

Specifications

CAS No:

104075-48-1

Formula:

$C_{14}H_{17}ClN_2$

Pathway:

GPCR/G Protein

Target:

Adrenergic Receptor

Purity / Grade:

>98%

Solubility:

DMSO : ≥ 47 mg/mL (188.94 mM); H₂O : 75 mg/mL (301.51 mM; Need ultrasonic and warming)

Alternative Names:

MPV-1248 hydrochloride

Observed Molecular Weight:

248.75

Product Description

Atipamezole hydrochloride is a synthetic α_2 -adrenoceptor antagonist with a K_i of 1.6 nM.

IC50 & Target: Ki: 1.6 nM^[1]

In Vitro: The affinity of atipamezole for α_2 -adrenoceptors and its α_2/α_1 selectivity ratio are considerably higher than yohimbine. Atipamezole is not selective for subtypes of α_2 -adrenoceptors. It has negligible affinity for 5-HT₁, 5-HT₂ and I₂ bindings sites^[1].

In Vivo: Atipamezole is well tolerated in rodents. In anesthetized, normotensive rats, the cardiovascular effects of atipamezole (0.01–1 mg/kg, i.v.) are rather modest. Atipamezole is commonly used by veterinarians to awaken animals from sedation or anesthesia. Atipamezole increases sexual activity in rats and monkeys. In animals with sustained nociception, atipamezole increases pain-related responses by blocking the noradrenergic feedback inhibition of pain. Atipamezole at low doses has beneficial effects on alertness, selective attention, planning, learning, and recall in experimental animals, but not necessarily on short-term working memory^[1].
