

ELISA Kit for Secondary Lymphoid Tissue Chemokine (SLC)

Catalog No: tcue20

SwissProt:

Q6ICR7

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Secondary Lymphoid Tissue Chemokine (SLC). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Secondary Lymphoid Tissue Chemokine (SLC). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Secondary Lymphoid Tissue Chemokine (SLC), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Secondary Lymphoid Tissue Chemokine (SLC) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
