

ELISA Kit for Malondialdehyde (MDA)

Catalog No: tcue280

Available Sizes

Size: 96T

Specifications

Research Area:

Metabolic pathway;Hepatology;Hormone metabolism;

Species Reactivity:

Pan-species (General)

Sample Type:

serum, plasma and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 9.15ng/mL

Detection Range:

24.69-2,000ng/mL

Assay Time:

2h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Malondialdehyde (MDA) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Malondialdehyde (MDA) and unlabeled Malondialdehyde (MDA) (Standards or samples) with the pre-coated antibody specific to Malondialdehyde (MDA). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of

Malondialdehyde (MDA) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Malondialdehyde (MDA) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
