

## **ELISA Kit for Protease Activated Receptor 2 (PAR2)**

Catalog No: tcue317

## **Tested Application:**

**ELISA** 

## **SwissProt:**

Q63645

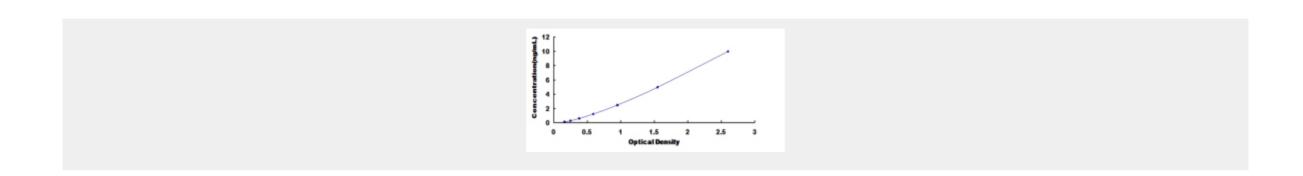

## **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Protease Activated Receptor 2 (PAR2). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Protease Activated Receptor 2 (PAR2). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Protease Activated Receptor 2 (PAR2), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450 \text{nm} \pm 10 \text{nm}$ . The concentration of Protease Activated Receptor 2 (PAR2) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
