

# **ELISA Kit for Thrombospondin 1 (THBS1)**

**Catalog No: tcue379** 

## **Available Sizes**

Size: 96T

# **Specifications**

#### **Research Area:**

Infection immunity; Hematology;

### **Species Reactivity:**

Mus musculus (Mouse)

#### **Sample Type:**

plasma, tissue homogenates and other biological fluids

## **Sensitivity:**

The minimum detectable dose of this kit is typically less than 0.266ng/mL

## **Detection Range:**

0.625-40ng/mL

#### **Assay Time:**

3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

## **Tested Application:**

**ELISA** 

#### **SwissProt:**

P35441

# **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Thrombospondin 1 (THBS1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Thrombospondin 1 (THBS1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Thrombospondin 1 (THBS1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450 \, \text{nm} \pm 10 \, \text{nm}$ . The concentration of Thrombospondin 1 (THBS1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
