

# **ELISA Kit for Caspase 9 (CASP9)**

**Catalog No: tcue400** 

## **Available Sizes**

Size: 96T

# **Specifications**

#### **Research Area:**

Signal transduction; Enzyme & Kinase; Apoptosis; Tumor immunity; Infection immunity;

## **Species Reactivity:**

Mus musculus (Mouse)

#### **Sample Type:**

tissue homogenates, cell lysates, cell culture supernates and other biological fluids

### **Sensitivity:**

The minimum detectable dose of this kit is typically less than 0.072ng/mL

## **Detection Range:**

0.156-10ng/mL

#### **Assay Time:**

3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

#### **Tested Application:**

**ELISA** 

#### **SwissProt:**

Q4FJK5

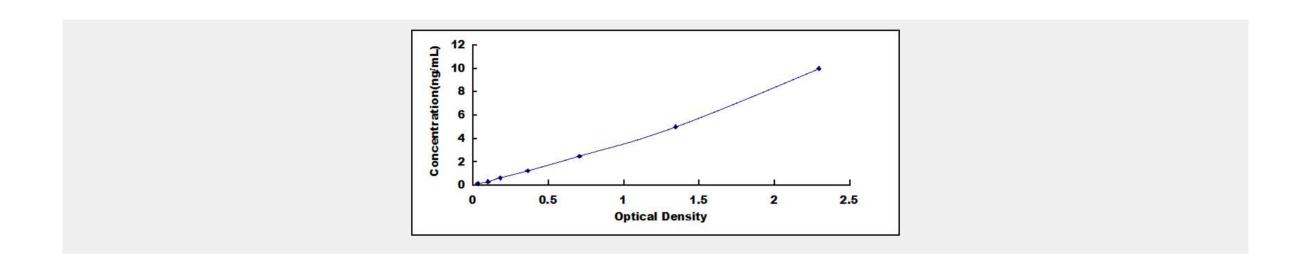

# **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Caspase 9 (CASP9). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Caspase 9 (CASP9). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Caspase 9 (CASP9), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of Caspase 9 (CASP9) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
