

# ELISA Kit for Arachidonic Acid (AA)

Catalog No: tcue475

## Available Sizes

Size: 96T

## Specifications

### Research Area:

Signal transduction;Metabolic pathway;Endocrinology;Neuro science;Hormone metabolism;Bone metabolism;

### Species Reactivity:

Pan-species (General)

### Sample Type:

serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids

### Sensitivity:

The minimum detectable dose of this kit is typically less than 0.95μg/mL

### Detection Range:

2.47-200ug/mL

### Assay Time:

2h

### Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

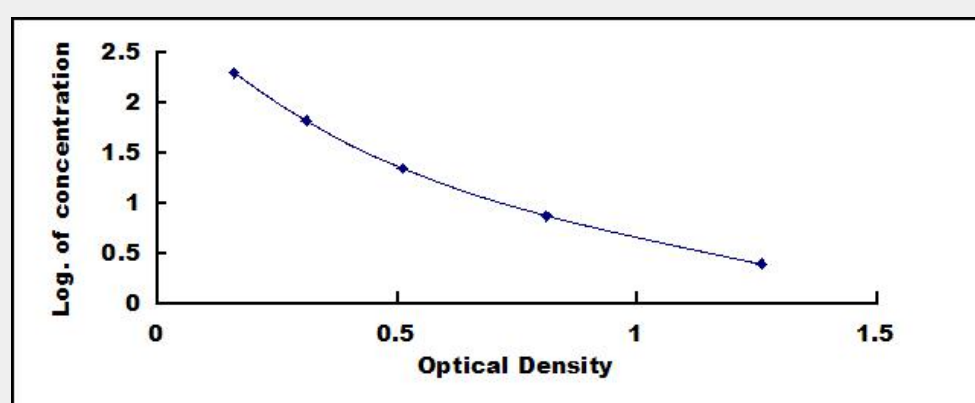

### Tested Application:

ELISA

## Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Arachidonic Acid (AA) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Arachidonic Acid (AA) and unlabeled Arachidonic Acid (AA) (Standards or samples) with the pre-coated antibody specific to Arachidonic Acid (AA). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Arachidonic Acid

(AA) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Arachidonic Acid (AA) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
