

# ELISA Kit for Antidiuretic Hormone (ADH)

Catalog No: tcue516

## Available Sizes

Size: 96T

## Specifications

### Research Area:

Signal transduction;Metabolic pathway;Endocrinology;Neuro science;Hormone metabolism;

### Species Reactivity:

Homo sapiens (Human)

### Sample Type:

serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids

### Sensitivity:

The minimum detectable dose of this kit is typically less than 4.91pg/mL

### Detection Range:

12.35-1,000pg/mL

### Assay Time:

2h

### Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

### Tested Application:

ELISA

## Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Antidiuretic Hormone (ADH) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Antidiuretic Hormone (ADH) and unlabeled Antidiuretic Hormone (ADH) (Standards or samples) with the pre-coated antibody specific to Antidiuretic Hormone (ADH). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the

concentration of Antidiuretic Hormone (ADH) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Antidiuretic Hormone (ADH) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
