

ELISA Kit for Relaxin (RLN)

Catalog No: tcue533

Available Sizes

Size: 96T

Specifications

Research Area:

Endocrinology; Reproductive science; Hormone metabolism;

Species Reactivity:

Homo sapiens (Human)

Sample Type:

Serum, plasma and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 8.92pg/mL

Detection Range:

24.69-2,000pg/mL

Assay Time:

2h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

p04808

Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Relaxin (RLN) has

been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Relaxin (RLN) and unlabeled Relaxin (RLN) (Standards or samples) with the pre-coated antibody specific to Relaxin (RLN). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Relaxin (RLN) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Relaxin (RLN) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
