

# **ELISA Kit for Complement C4-B (C4B)**

**Catalog No: tcue603** 

## **Available Sizes**

Size: 96T

# **Specifications**

#### **Research Area:**

Metabolic pathway;Infection immunity;Immune molecule;

## **Species Reactivity:**

Homo sapiens (Human)

#### **Sample Type:**

serum, plasma and other biological fluids

## **Sensitivity:**

The minimum detectable dose of this kit is typically less than 2.1ng/mL

## **Detection Range:**

4.7-300ng/mL

#### **Assay Time:**

3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

# **Tested Application:**

**ELISA** 

#### **SwissProt:**

P0C0L5

## **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Complement C4-B (C4B). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Complement C4-B (C4B). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Complement C4-B (C4B), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450 \text{nm} \pm 10 \text{nm}$ . The concentration of Complement C4-B (C4B) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
