

ELISA Kit for Neurofilament 3 (NEF3)

Catalog No: tcue615

Available Sizes

Size: 96T

Specifications

Research Area:

Neuro science;Developmental science;

Species Reactivity:

Homo sapiens (Human)

Sample Type:

serum, plasma, tissue homogenates, cerebrospinal fluid and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 6.1pg/mL

Detection Range:

15.6-1,000pg/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

P07197

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Neurofilament 3 (NEF3). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Neurofilament 3 (NEF3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Neurofilament 3 (NEF3), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Neurofilament 3 (NEF3) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
