

ELISA Kit for Anti-Insulin Receptor Antibody (Anti-ISR)

Catalog No: tcue702

Available Sizes

Size: 96T

Specifications

Research Area:

Signal transduction;Endocrinology;Autoimmunity;

Species Reactivity:

Homo sapiens (Human)

Sample Type:

Serum, plasma and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 1.21ng/mL

Detection Range:

3.12-200ng/mL

Assay Time:

2h, 30min

Detection Method:

Enzyme-linked immunosorbent assay for Antibody Detection.

Tested Application:

ELISA

SwissProt:

P06213

Test Principle

The microtiter plate provided in this kit has been pre-coated with an antigen. Standards or samples are then added to the

appropriate microtiter plate wells with a Horseradish Peroxidase (HRP)-conjugated secondary antibody. After TMB substrate solution is added, those wells that contain Anti-Insulin Receptor Antibody (Anti-ISR) will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Anti-Insulin Receptor Antibody (Anti-ISR) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
