

# **ELISA Kit for Protein C (PROC)**

Catalog No: tcue818

# **Available Sizes**

Size: 96T

# **Specifications**

#### **Research Area:**

Enzyme & Kinase; Hematology; Cardiovascular biology;

### **Species Reactivity:**

Homo sapiens (Human)

# **Sample Type:**

plasma

# **Sensitivity:**

The minimum detectable dose of this kit is typically less than 29.1pg/mL

# **Detection Range:**

62.5-4,000pg/mL

### **Assay Time:**

3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

# **Tested Application:**

**ELISA** 

#### **SwissProt:**

P04070

# **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Protein C (PROC). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Protein C (PROC). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Protein C (PROC), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450 \text{nm} \pm 10 \text{nm}$ . The concentration of Protein C (PROC) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
