

# ELISA Kit for Receptor I For The Fc Region Of Immunoglobulin G (FcgRI)

**Catalog No: tcue847** 

Available Sizes

**Size:** 96T

**Research Area:** CD & Adhesion molecule;Infection immunity;

# **Species Reactivity:**

Homo sapiens (Human)

**Sample Type:** serum, plasma, tissue homogenates and other biological fluids

## Sensitivity:

The minimum detectable dose of this kit is typically less than 31pg/mL

#### **Detection Range:**

78-5,000pg/mL

# **Assay Time:** 3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

## **Tested Application:**

ELISA

# SwissProt:

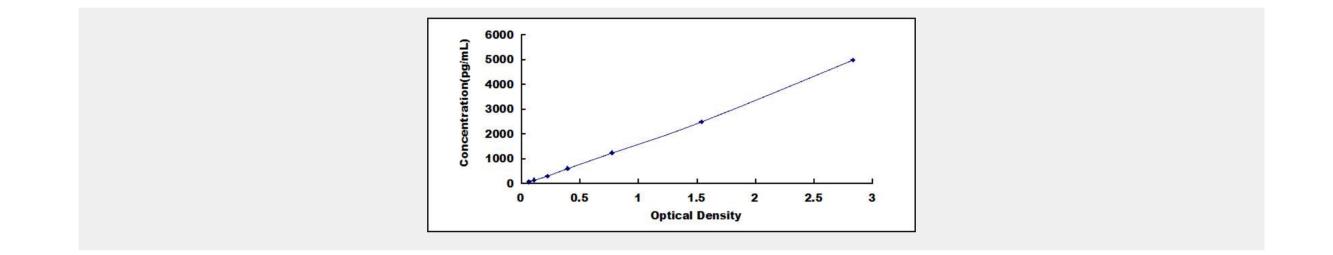

P12314

# **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Receptor I For The Fc Region Of Immunoglobulin G (FcgRI). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Receptor I For The Fc Region Of Immunoglobulin G (FcgRI). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Receptor I For The Fc Region Of Immunoglobulin G (FcgRI), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of Receptor I For The Fc Region Of Immunoglobulin G (FcgRI) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
