ELISA Kit for Chemokine C-C-Motif Receptor 7 (CCR7)

Catalog No: tcue940

Available Sizes

Size: 96T

Specifications

Research Area:
Signal transduction;CD & Adhesion molecule;Tumor immunity;Infection immunity;

Species Reactivity:
Homo sapiens (Human)

Sample Type:
tissue homogenates, cell lysates and other biological fluids

Sensitivity:
The minimum detectable dose of this kit is typically less than 0.058ng/mL

Detection Range:
0.156-10ng/mL

Assay Time:
3h

Detection Method:
Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:
ELISA

SwissProt:
P32248

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Chemokine C-C-Motif Receptor 7 (CCR7). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Chemokine C-C-Motif Receptor 7 (CCR7). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Chemokine C-C-Motif Receptor 7 (CCR7), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Chemokine C-C-Motif Receptor 7 (CCR7) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
