

ELISA Kit for Beta-Thromboglobulin (bTG)

Catalog No: tcue1019

Available Sizes

Size: 96T

Specifications

Research Area:

Cytokine;Hematology;

Species Reactivity: Rattus norvegicus (Rat)

Sample Type:

Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.

Sensitivity:

The minimum detectable dose of this kit is typically less than 1.47pg/mL

Detection Range:

3.12-200pg/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

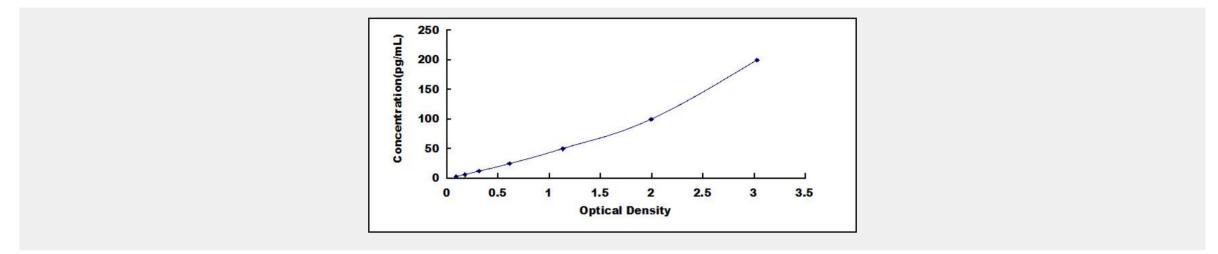

Q99ME0

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Beta-Thromboglobulin (bTG). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Beta-Thromboglobulin (bTG). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Beta-Thromboglobulin (bTG), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzymesubstrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Beta-Thromboglobulin (bTG) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
