ELISA Kit for Fibroblast Growth Factor 7 (FGF7)

Catalog No: tcue1023

Available Sizes

Size: 96T

Specifications

Research Area:
Cytokine;Tumor immunity;Infection immunity;Developmental science;Pulmonology;Dermatology;

Species Reactivity:
Sus scrofa; Porcine (Pig)

Sample Type:
Serum, plasma, tissue homogenates and other biological fluids.

Sensitivity:
The minimum detectable dose of this kit is typically less than 5.5pg/mL

Detection Range:
15.62-1000pg/mL

Assay Time:
3h

Detection Method:
Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:
ELISA

SwissProt:
Q9N198

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Fibroblast Growth Factor 7 (FGF7). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Fibroblast Growth Factor 7 (FGF7). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Fibroblast Growth Factor 7 (FGF7), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Fibroblast Growth Factor 7 (FGF7) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
