

# ELISA Kit for Immunoglobulin E (IgE)

Catalog No: tcue1024

## Available Sizes

**Size:** 96T

## Specifications

### Research Area:

Infection immunity; Immune molecule; Hematology; Autoimmunity;

### Species Reactivity:

Sus scrofa; Porcine (Pig)

### Sample Type:

serum, plasma and other biological fluids

### Sensitivity:

The minimum detectable dose of this kit is typically less than 0.071ng/mL

### Detection Range:

0.156-10ng/mL

### Assay Time:

3h

### Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

### Tested Application:

ELISA

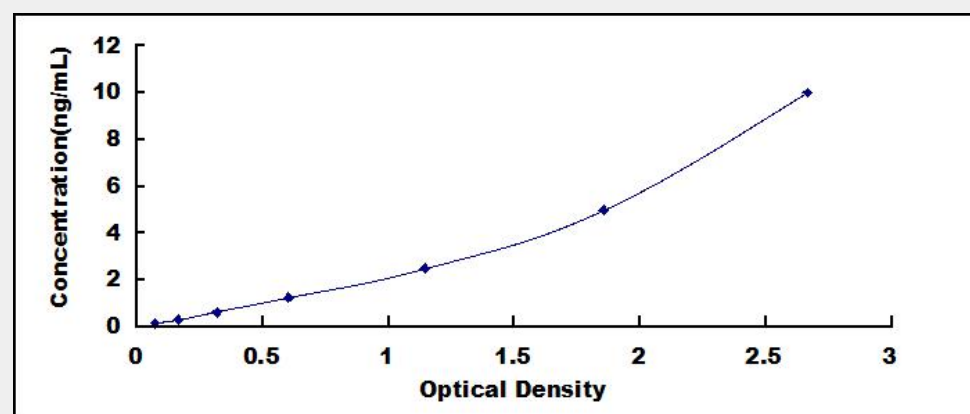

### SwissProt:

K7ZJQ0

## Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Immunoglobulin E (IgE). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Immunoglobulin E (IgE). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Immunoglobulin E (IgE), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450\text{nm} \pm 10\text{nm}$ . The concentration of Immunoglobulin E (IgE) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
