

# ELISA Kit for Epidermal Growth Factor Receptor (EGFR) Catalog No: tcue1083

**Available Sizes** 

**Size:** 96T

Specifications

Research Area:

CD & Adhesion molecule; Tumor immunity;

**Species Reactivity:** Rattus norvegicus (Rat)

**Sample Type:** Serum, plasma and other biological fluids.

#### Sensitivity:

The minimum detectable dose of this kit is typically less than 0.132ng/mL

**Detection Range:** 

0.312-20ng/mL

#### Assay Time:

3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

### **Tested Application:**

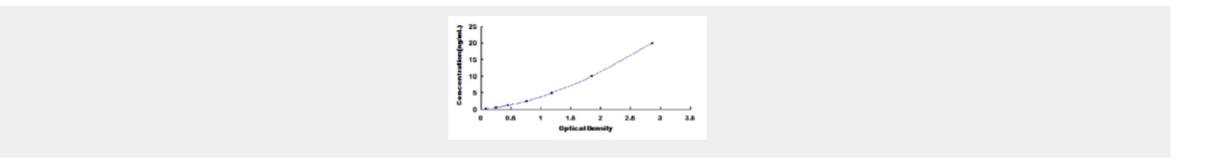

ELISA

## **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Epidermal Growth Factor Receptor (EGFR). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Epidermal Growth Factor Receptor (EGFR). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Epidermal Growth Factor Receptor (EGFR), biotin-conjugated antibody and enzyme-conjugated Avidin

will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm  $\pm$  10nm. The concentration of Epidermal Growth Factor Receptor (EGFR) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
