

ELISA Kit for Kidney Injury Molecule 1 (Kim1)

Catalog No: tcue1192

Available Sizes

Size: 96T

Specifications

Research Area:

Tumor immunity; Infection immunity; Kidney biomarker;

Species Reactivity:

Mus musculus (Mouse)

Sample Type:

tissue homogenates, urine, cell culture supernates and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 15pg/mL

Detection Range:

39-2,500pg/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

Q5QNS5

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Kidney Injury Molecule 1 (Kim1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Kidney Injury Molecule 1 (Kim1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Kidney Injury Molecule 1 (Kim1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Kidney Injury Molecule 1 (Kim1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
