

ELISA Kit for 17-Hydroxyprogesterone (17-OHP)

Catalog No: tcue1343

Available Sizes

Size: 96T

Specifications

Research Area:

Endocrinology; Reproductive science; Hormone metabolism;

Species Reactivity:

Pan-species (General)

Sample Type:

serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 87.3pg/mL

Detection Range:

246.9-20000pg/mL

Assay Time:

2h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to 17-Hydroxyprogesterone (17-OHP) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled 17-Hydroxyprogesterone (17-OHP) and unlabeled 17-Hydroxyprogesterone (17-OHP) (Standards or samples) with the pre-coated antibody specific to 17-Hydroxyprogesterone (17-OHP). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is

reverse proportional to the concentration of 17-Hydroxyprogesterone (17-OHP) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of 17-Hydroxyprogesterone (17-OHP) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
