

# **ELISA Kit for N-Terminal Pro-Atrial Natriuretic Peptide** (NT-ProANP)

Catalog No: tcue1365

**Available Sizes** 

**Size: 96**T

**Specifications** 

**Research Area:** Endocrinology;Cardiovascular biology;

## **Species Reactivity:**

Mus musculus (Mouse)

Sample Type:

Serum, plasma and other biological fluids.

#### Sensitivity:

The minimum detectable dose of this kit is typically less than 29pg/mL

#### **Detection Range:**

78.12-5000pg/mL

## **Assay Time:** 3h

#### **Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

### **Tested Application:**

ELISA

# SwissProt:

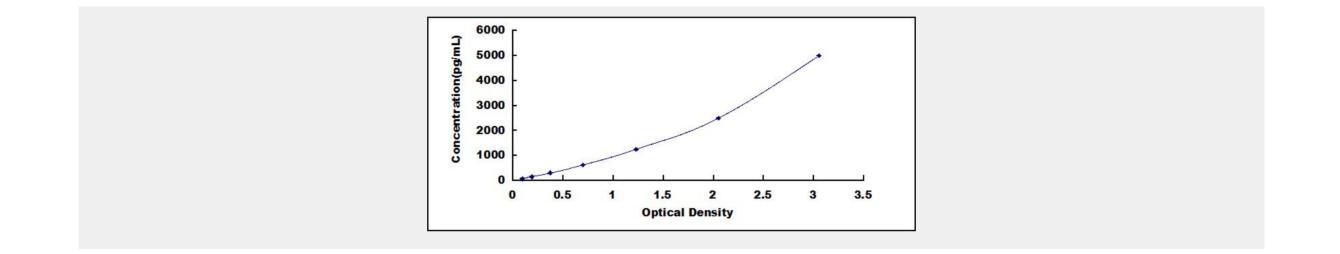

P05125

# **Test Principle**

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to N-Terminal Pro-Atrial Natriuretic Peptide (NT-ProANP). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to N-Terminal Pro-Atrial Natriuretic Peptide (NT-ProANP). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain N-Terminal Pro-Atrial Natriuretic Peptide (NT-ProANP), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of N-Terminal Pro-Atrial Natriuretic Peptide (NT-ProANP) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
