

ELISA Kit for Cytochrome P450 7A1 (CYP7A1)

Catalog No: tcue1479

Avail	able Sizes
Size: 96T	
Spec	ifications
Research Ar Metabolic pat	
Species Rea Homo sapien	
Sample Typ tissue homog	e: Jenates, cell lysates and other biological fluids
Sensitivity: The minimum	n detectable dose of this kit is typically less than 0.31ng/mL
Detection R 0.78 -50ng/m	
Assay Time: 3h	
Detection M Enzyme-linke	lethod: ed immunosorbent assay for Antigen Detection.
Tested Appl	lication:

ELISA

SwissProt:

P22680

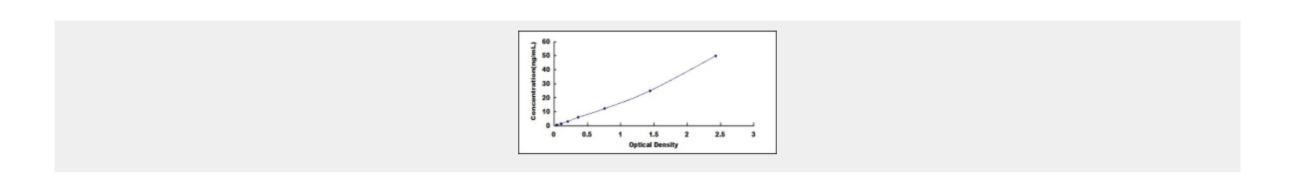

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Cytochrome P450 7A1 (CYP7A1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Cytochrome P450 7A1 (CYP7A1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Cytochrome P450 7A1 (CYP7A1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of Cytochrome P450 7A1 (CYP7A1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
