

ELISA Kit for Myeloid Progenitor Inhibitory Factor 1 (MPIF1)

Catalog No: tcue1499

SwissProt:

P55773

Available Sizes
Size: 96T
Specifications
Research Area: Cytokine;Tumor immunity;Infection immunity;
Species Reactivity: Homo sapiens (Human)
Sample Type: Serum, plasma and other biological fluids.
Sensitivity: The minimum detectable dose of this kit is typically less than 0.47pg/mL
Detection Range: 15.62-1000pg/mL
Assay Time: 3h
Detection Method: Enzyme-linked immunosorbent assay for Antigen Detection.
Tested Application: ELISA

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Myeloid Progenitor Inhibitory Factor 1 (MPIF1). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Myeloid Progenitor Inhibitory Factor 1 (MPIF1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Myeloid Progenitor Inhibitory Factor 1 (MPIF1), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Myeloid Progenitor Inhibitory Factor 1 (MPIF1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
