ELISA Kit for Neutrophil Activating Protein 3 (NAP3)

Catalog No: tcue1519

Available Sizes

Size: 96T

Specifications

Research Area:
Cytokine;Tumor immunity;Infection immunity;

Species Reactivity:
Rattus norvegicus (Rat)

Sample Type:
serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids

Sensitivity:
The minimum detectable dose of this kit is typically less than 6.7pg/mL

Detection Range:
15.6-1000pg/mL

Assay Time:
3h

Detection Method:
Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:
ELISA

SwissProt:
P14095

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Neutrophil Activating Protein 3 (NAP3). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Neutrophil Activating Protein 3 (NAP3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Neutrophil Activating Protein 3 (NAP3), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Neutrophil Activating Protein 3 (NAP3) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
