

ELISA Kit for N-Acetyl Beta-D-Glucosaminidase (NAGase)

Catalog No: tcue1589

Q8VIJ5

Available Sizes
Size: 96T
Specifications
Research Area: Enzyme & Kinase;Kidney biomarker;
Species Reactivity: Rattus norvegicus (Rat)
Sample Type: urine
Sensitivity: The minimum detectable dose of this kit is typically less than 0.55ng/mL
Detection Range: 1.56-100ng/mL
Assay Time: 3h
Detection Method: Enzyme-linked immunosorbent assay for Antigen Detection.
Tested Application: ELISA
SwissProt:

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to N-Acetyl Beta-D-Glucosaminidase (NAGase). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to N-Acetyl Beta-D-Glucosaminidase (NAGase). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain N-Acetyl Beta-D-Glucosaminidase (NAGase), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm \pm 10nm. The concentration of N-Acetyl Beta-D-Glucosaminidase (NAGase) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
