

# ELISA Kit for Tissue Inhibitors Of Metalloproteinase 3 (TIMP3)

Catalog No: **tcue2051**

## Available Sizes

---

**Size:** 96T

## Specifications

---

**Research Area:**

Tumor immunity; Cardiovascular biology;

---

**Species Reactivity:**

Equus caballus; Equine (Horse)

---

**Sample Type:**

Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.

---

**Sensitivity:**

The minimum detectable dose of this kit is typically less than 0.115ng/mL

---

**Detection Range:**

0.312-20ng/mL

---

**Assay Time:**

3h

---

**Detection Method:**

Enzyme-linked immunosorbent assay for Antigen Detection.

---

**Tested Application:**

ELISA

---

## Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Tissue Inhibitors Of Metalloproteinase 3 (TIMP3). Standards or samples are then added to the appropriate

microtiter plate wells with a biotin-conjugated antibody specific to Tissue Inhibitors Of Metalloproteinase 3 (TIMP3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Tissue Inhibitors Of Metalloproteinase 3 (TIMP3), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of  $450\text{nm} \pm 10\text{nm}$ . The concentration of Tissue Inhibitors Of Metalloproteinase 3 (TIMP3) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
