

ELISA Kit for Coagulation Factor V (F5)

Catalog No: tcue2298

Available Sizes

Size: 96T

Specifications

Research Area:

Enzyme & Kinase;Metabolic pathway;Hematology;

Species Reactivity:

Mus musculus (Mouse)

Sample Type:

plasma

Sensitivity:

The minimum detectable dose of this kit is typically less than 45pg/mL

Detection Range:

125-8000pg/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

O88783

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Coagulation Factor V (F5). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Coagulation Factor V (F5). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Coagulation Factor V (F5), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Coagulation Factor V (F5) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
