

ELISA Kit for Growth Hormone (GH)

Catalog No: tcue2351

Available Sizes

Size: 96T

Specifications

Research Area:

Endocrinology;Neuro science;Hormone metabolism;

Species Reactivity:

Equus caballus; Equine (Horse)

Sample Type:

Serum, plasma and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 95.8pg/mL

Detection Range:

246.91-20000pg/mL

Assay Time:

2h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

SwissProt:

P01245

Test Principle

This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Growth Hormone

(GH) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Growth Hormone (GH) and unlabeled Growth Hormone (GH) (Standards or samples) with the pre-coated antibody specific to Growth Hormone (GH). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Growth Hormone (GH) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Growth Hormone (GH) in the sample.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
