

ELISA Kit for V-Myc Myelocytomatosis Viral Oncogene Homolog (MYC)

Catalog No: tcue2388

Available Sizes

Size: 96T

Specifications

Research Area:

Tumor immunity;

Species Reactivity:

Rattus norvegicus (Rat)

Sample Type:

Serum, plasma, tissue homogenates, cell lysates and other biological fluids.

Sensitivity:

The minimum detectable dose of this kit is typically less than 0.062ng/mL

Detection Range:

0.156-10ng/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to V-Myc Myelocytomatosis Viral Oncogene Homolog (MYC). Standards or samples are then added to the

appropriate microtiter plate wells with a biotin-conjugated antibody specific to V-Myc Myelocytomatosis Viral Oncogene Homolog (MYC). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain V-Myc Myelocytomatosis Viral Oncogene Homolog (MYC), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of V-Myc Myelocytomatosis Viral Oncogene Homolog (MYC) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
