ELISA Kit for N-Methylpurine DNA Glycosylase (MPG)

Catalog No: tcue2778

Available Sizes

Size: 96T

Specifications

Research Area:
Enzyme & Kinase;

Species Reactivity:
Homo sapiens (Human)

Sample Type:
tissue homogenates, cell lysates and other biological fluids

Sensitivity:
The minimum detectable dose of this kit is typically less than 0.060ng/mL

Detection Range:
0.156-10ng/mL

Assay Time:
3h

Detection Method:
Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:
ELISA

SwissProt:
P29372

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to N-Methylpurine DNA Glycosylase (MPG). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to N-Methylpurine DNA Glycosylase (MPG). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain N-Methylpurine DNA Glycosylase (MPG), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of N-Methylpurine DNA Glycosylase (MPG) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
