

ELISA Kit for CD5 Antigen Like Protein (CD5L)

Catalog No: tcue2846

Tested Application:

ELISA

SwissProt:

Q9QWK4

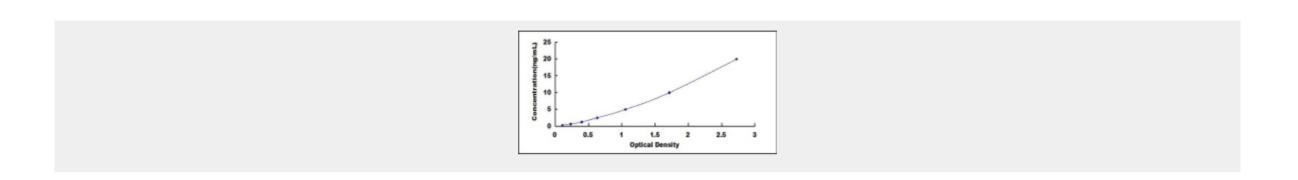

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to CD5 Antigen Like Protein (CD5L). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to CD5 Antigen Like Protein (CD5L). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain CD5 Antigen Like Protein (CD5L), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of CD5 Antigen Like Protein (CD5L) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
