

ELISA Kit for Discs, Large Homolog 4 (DLG4)

Catalog No: tcue3157

Available Sizes

Size: 96T

Specifications

Research Area:

Signal transduction;

Species Reactivity:

Mus musculus (Mouse)

Sample Type:

tissue homogenates, cell lysates and other biological fluids

Sensitivity:

The minimum detectable dose of this kit is typically less than 0.056ng/mL

Detection Range:

0.156-10ng/mL

Assay Time:

3h

Detection Method:

Enzyme-linked immunosorbent assay for Antigen Detection.

Tested Application:

ELISA

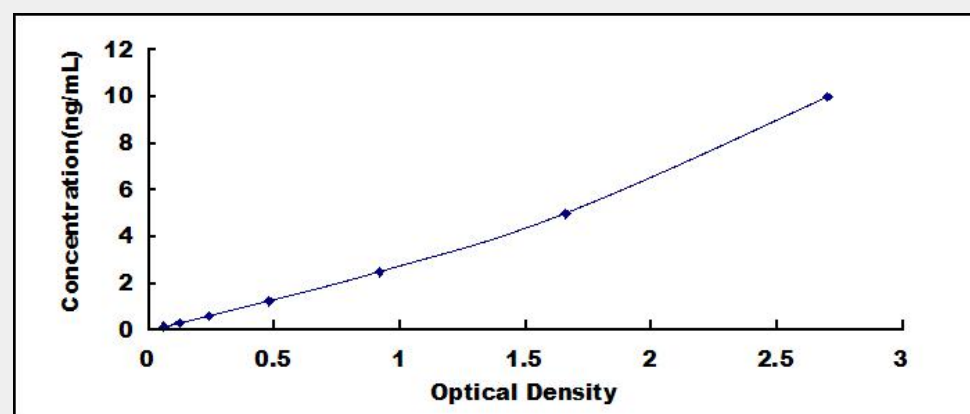

SwissProt:

Q62108

Test Principle

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated

with an antibody specific to Discs, Large Homolog 4 (DLG4). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Discs, Large Homolog 4 (DLG4). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Discs, Large Homolog 4 (DLG4), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Discs, Large Homolog 4 (DLG4) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
